

# ROCK ARMOR

High Performance Rock & Theming Coloring System

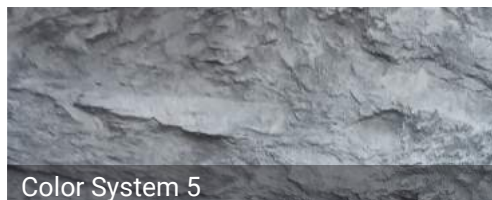

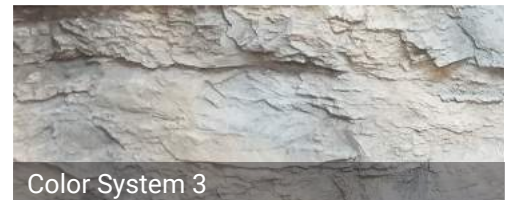

**WaterPark Tech** has developed the next generation of a paint system for rock water features and other theming projects. The system is comprised of a water based polyurethane coating for the base color, a mid-tone color “Wash” and accent colors. Then the coloring system top coated with a clear polyurethane coat.

The system has a high resistance to UV and chlorinated pool water. In addition, the system will not darken or fade in the water areas like conventional acrylic coloring systems. It also retains its coloring for 3-4 times than the typical systems.

## Features

- High UV Resistance
- Chlorine Resistance
- Performs in Immersion Applications
- Fungal Resistant
- Inhibits Calcium & Scum Deposits

## Examples of Coloring Schemes

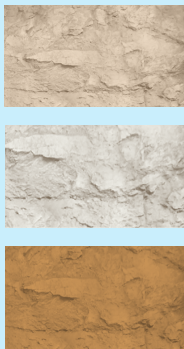

# System Breakdown

The typical rock coloring process used by the contractor is done with conventional water based acrylic paints. These acrylic paints were never designed for water features and other themed painted elements that are involved in water related applications. The Theme Armor is a high performance water-based polyurethane system that has enhanced chemical and water resistance. Another key part of the system is the high performance solvent based clear topcoats that are available in three gloss options. This adds the ultimate level of fade protection against chlorinated water, UV and dirt/scum build up.

## Base Coat Colors

The Theme Armor 1260 Base Coat Color provides the initial background color. Typically they are light grey's tans, and taupes.

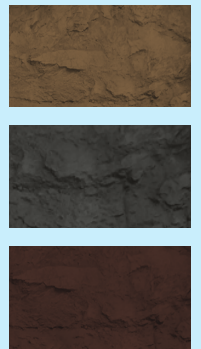

## Mid-Tones "Wash"

Theme Armor 1260 Mid-Tones provides the main color scheme of brown, tan and grey tones.

## Accent Colors

Theme Armor 1260 Accent Color provides the coloring depth (darker grey's, blacks, oranges, dark browns and dark tans).

## Clear Coat

The Theme Coat 2500 series is the key portion of the system. This high performance Polyurethane clear coat seals and protects the coloring system from being bleached by UV and chlorinated water. The clear coat is designed to perform in both splash and immersion applications. Theme Armor 2500 series is available in 3 different gloss levels – gloss, satin and flat.
